

Seat Belt Massager

Abstract of the Disclosure

A seat belt massager for detachably fastening on a seat belt, includes a massager body which has a message portion defining an inner treatment surface; a massaging
5 device supported on the message portion of the massager body and communicated with the treatment surface in such manner that the massaging device is adapted to deliver message impulse to an exterior of the massager body through the treatment surface; and a seat belt fastening arrangement provided on the massager body for detachably fastening the massager body on the seat belt.
